APOLLO®

FlexShare™ Consortia

Customize your consortium *and* retain your autonomy

Apollo's FlexShare is the most versatile consortium package available. Imagine sharing your resources with other Apollo libraries while retaining your autonomy. Consider:
  - You keep your own, separate Apollo account.
  - You retain direct access to Biblionix and its highly acclaimed Support.
  - Your data is NOT merged together and no barcode label shenanigans are required.
There is no charge to use FlexShare. Libraries can enter and exit a FlexShare consortium at will and at no cost. You can actually have geographically overlapping consortia.

Yes, your group can have the consortium of its dreams. You can choose a simple approach of discovery only, where patrons seamlessly search others' catalogs. Or go all the way and allow for cross-library reserving and transporting. Want to maximize privacy? There are choices for that too. The bottom line is that you choose the sweet spot for your group.

Searching only	In-library borrowing only	Checkin items anywhere	Reserving & transporting
